Keyboard Shortcuts

Article • 03/31/2022 • 15 minutes to read • 7 contributors

This article provides an overview of some of the shortcut key combinations that you can use when you're working with Business Central.

For an overview of the most popular keyboard shortcuts, see Keyboard Shortcuts (PC only).

Tip

For a graphical view of the most used shortcuts, choose the following image and download the PDF file.

Overview

Keyboard shortcuts aid accessibility and can make it easier and more efficient to navigate to different areas and elements on a page. They're supported by most web browsers, however, the behavior may vary slightly.

Note

The keyboard shortcuts described here refer to the U.S. keyboard layout. The layout of the keys on other keyboards may not correspond exactly to the keys on a U.S. keyboard.

Most of the shortcuts are the same whether the operating system is Windows or macOS. However, some shortcuts differ for macOS. These shortcuts are indicated with brackets in the following sections.

In this article

- General Keyboard Shortcuts
- Keyboard Shortcuts in Lists
- Keyboard Shortcuts in Cards and Documents

After you enable this feature for all users, you cannot turn it off again. This is because the feature may include changes to your data and may initiate an upgrade of some database tables as soon as you enable it.

We strongly recommend that you first enable and test this feature on a sandbox environment that has a copy of production data before doing this on a production environment.

For detailed information about the impact of enabling this feature, you should choose No and use the Learn more link.

Are you sure you want to enable this feature?
